

Deciduous

Deciduous means to fall off. In relation to plants, this means that the plant loses its leaves, usually in autumn. In autumn, deciduous trees shed their leaves as they are no longer needed and the amount of sunlight has reduced. The leaves will then grow again in spring.

Did you know... A typical tree has enough wood to make 170,100 pencils!

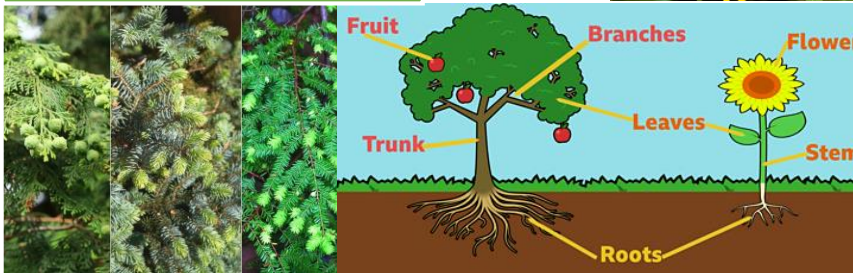

Plants Hedgehogs Summer 1

Key Learning Objectives

- 1) To identify different types of plants
- 2) To compare different plants, including trees.
- 3) To make close observations of the structures of flowering plants.
- 4) To name the basic structures of a flowering plant.
- 5) To observe the growth of a plant.
- 6) To name and describe various flowering plants, including trees.

Evergreen

Evergreen plants are plants that never lose their leaves - they "stay green" all year long.
